The international **surgery** market is highly competitive with the presence of numerous large and small vendors with huge market shares. The annual growth rate for the complete surgery market is forecast to be 7% for 2011-2020. The report, titled "Insignificantly Invasive Surgery Market - Global Industry Analysis, Growth, Trends and Forecast, 2013-2019", states that showing a hearty CAGR of 10.50% from 2013 to 2019, the negligibly obtrusive surgery market is foreseen to prolong from an estimation of US\$25 bn in 2012 to US\$50.6 bn in 2019.

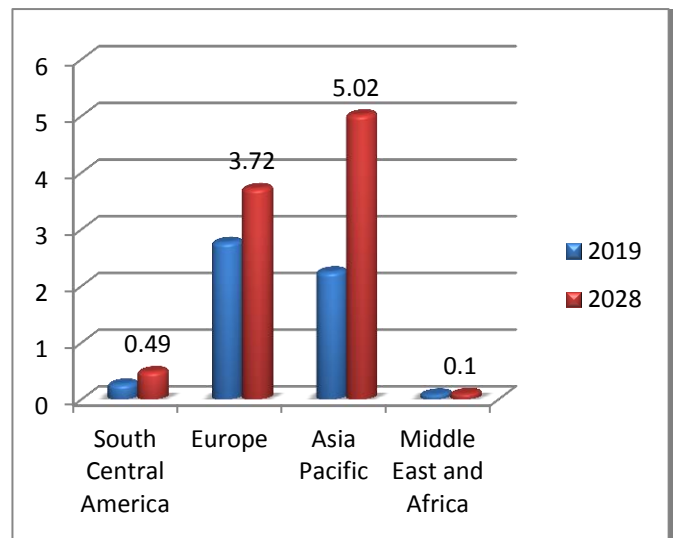

Surgical care has a major role in treating a broad spectrum of diseases in humans. It is required at all ages; from neonates with congenital anomalies to the aged with cataracts. Surgery can be done to minimize the growth of cancer and is also used in lowering HIV transmission via circumcision. It places a major role in acute emergency care such as bowel perforations and trauma and also to cure chronic illness such as osteoarthritis.

In current years the surgical methods have been growing and the field of surgical instrumentation is also found to develop at the maximum rate. According to the recent survey carried out by the National Centre for Health Statistics cardiac surgeries stands at the top and the ear surgeries stand the least. The below graph shows the statistical analysis of different kinds of procedures performed.

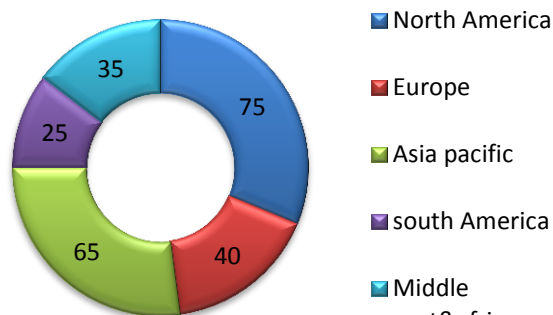

"Surgical Energy Instruments- General **Surgery** Market Analysis and Forecast Model" reveals that the rising number of surgical procedures, growing prevalence of a number of chronic ailments and an increasing ageing population are driving the market forward. Asia-Pacific will be one of the fastest growing areas at a CAGR of 9.3% between 2019 and 2028, followed by South Central America at a CAGR of 6.8%. Middle East and Africa region is expected to witness slow market penetration due to lack of infrastructure and low procedural volume.

Global Surgical Energy Instruments Market Size by Region:

Global minimally invasive surgical devices market is incredibly fragmented and the most important players have used a variety of strategies such as new product launches, expansions, agreements, joint ventures, partnerships, acquisitions and others to expand their footprints in this market. The report includes market shares of minimally invasive surgical devices market for Global, Europe, North America, Asia-Pacific, South America and Middle East & Africa.

Global Minimally Invasive Surgical Instruments Market -Industry trends and forecast to 2026
